**Order of Operations****Order of Operation Rules**

1. First, do the operations in parentheses.
2. Multiply and divide from left to right.
3. Add and subtract from left to right.

Step 1	Step 2	Step 3	Step 4
$15 \div 5 + 2 \times 3 - 2$ <p>Since there are no parentheses, compute <math>15 \div 5</math> first because moving from left to right you multiply or divide whichever comes first.</p>	$\begin{array}{r} 3 + 2 \times 3 - 2 \\ \uparrow \\ 15 \div 5 = 3 \end{array}$ <p>The expression above shows the first computation completed. Moving left to right look for multiplication or division. Compute <math>2 \times 3 = 6</math></p>	$\begin{array}{r} 3 + 6 - 2 \\ \uparrow \\ 2 \times 3 = 6 \end{array}$ <p>All of the multiplication and division is complete. Continue to move left to right adding and subtracting.</p>	$\begin{array}{r} 9 - 2 = 7 \\ \uparrow \\ 3 + 6 = 9 \end{array}$ <p>The last operation which is subtraction is completed. The value of the expression is 7.</p>

Look at this next example below.

$(48 \div 6) \times 3 + 2$ Complete the operation in the parentheses first.	$8 \times 3 + 2$ Now there are no parentheses so moving left to right, compute the multiplication or division.	$24 + 2$ Here, the multiplication is done. $8 \times 3 = 24$	$24 + 2 = 26$ Complete the last operation which is addition. The value of the expression is 26.
